

# Modern Identity Governance and Administration (IGA)

# About Omada

Omada is a leader in identity governance and administration (IGA), bringing more than 20 years of identity governance experience to our customers through best practices, and a flexible and adaptable solution. In addition, Omada boasts several key differentiators:

+ Omada Identity Cloud is the leading IGA solution. We provide an enterprise-ready, full-featured IGA SaaS solution that automates control of policies and processes across dynamic, hybrid environments, no matter what scale or unique requirements.

+ Gartner has named Omada a Leader in the Magic Quadrant for IGA in 2019. Our product scored highest in the Governance use case in Gartner's Critical Capabilities for IGA Report 2019.

+ Since 2000, Omada has had an industry-leading success rate in the deployment and execution of identity governance projects. In addition, you can ensure cloud deployments within 12 weeks with Omada Accelerator.

Business focused IGA SaaS solution

Named a Leader in the Gartner Magic Quadrant for IGA 2019

Scored highest for Identity Governance in Gartner's Critical Capabilities Report 2019

Strong focus on delivering value

**78%**

Of IT leaders believe employees have put data at risk last year

# Typical IGA Challenges

## Security

Get full transparency into access risks and take action to prevent breaches.

## Efficiency

Enable growth with automatic provisioning, seamless workflows and optimized help desk capacity.

## Compliance

Face every audit with confidence, without a huge manual effort.

# State of IGA Maturity

“DRIVEN BY DIGITAL TRANSFORMATION INITIATIVES, SAAS ADOPTION FOR IAM SERVICES CONTINUES TO GROW...”

Gartner, July 2020

You need a solution that will help your business prepare for the future, to scale with you and grow as your business and the world around you changes. That solution is Modern IGA, which allows you to take back control of IT through the use of a full-featured IGA solution, built on cloud-native architecture to ensure rapid time to value. At Omada, we divide IGA maturity into three levels: manual, legacy and modern.

In the manual state the organization is early on in their IGA maturity. Most have taken a first step to managing identities by implementing Microsoft AD for authentication, leaving everything else to be managed manually.

A legacy IGA solution is characterized by customization and high maintenance cost. Most of these systems struggle to support automation of complex business processes. Some SaaS solutions also belong to this group as they are not cloud-native, have limited IGA capabilities and cannot scale.

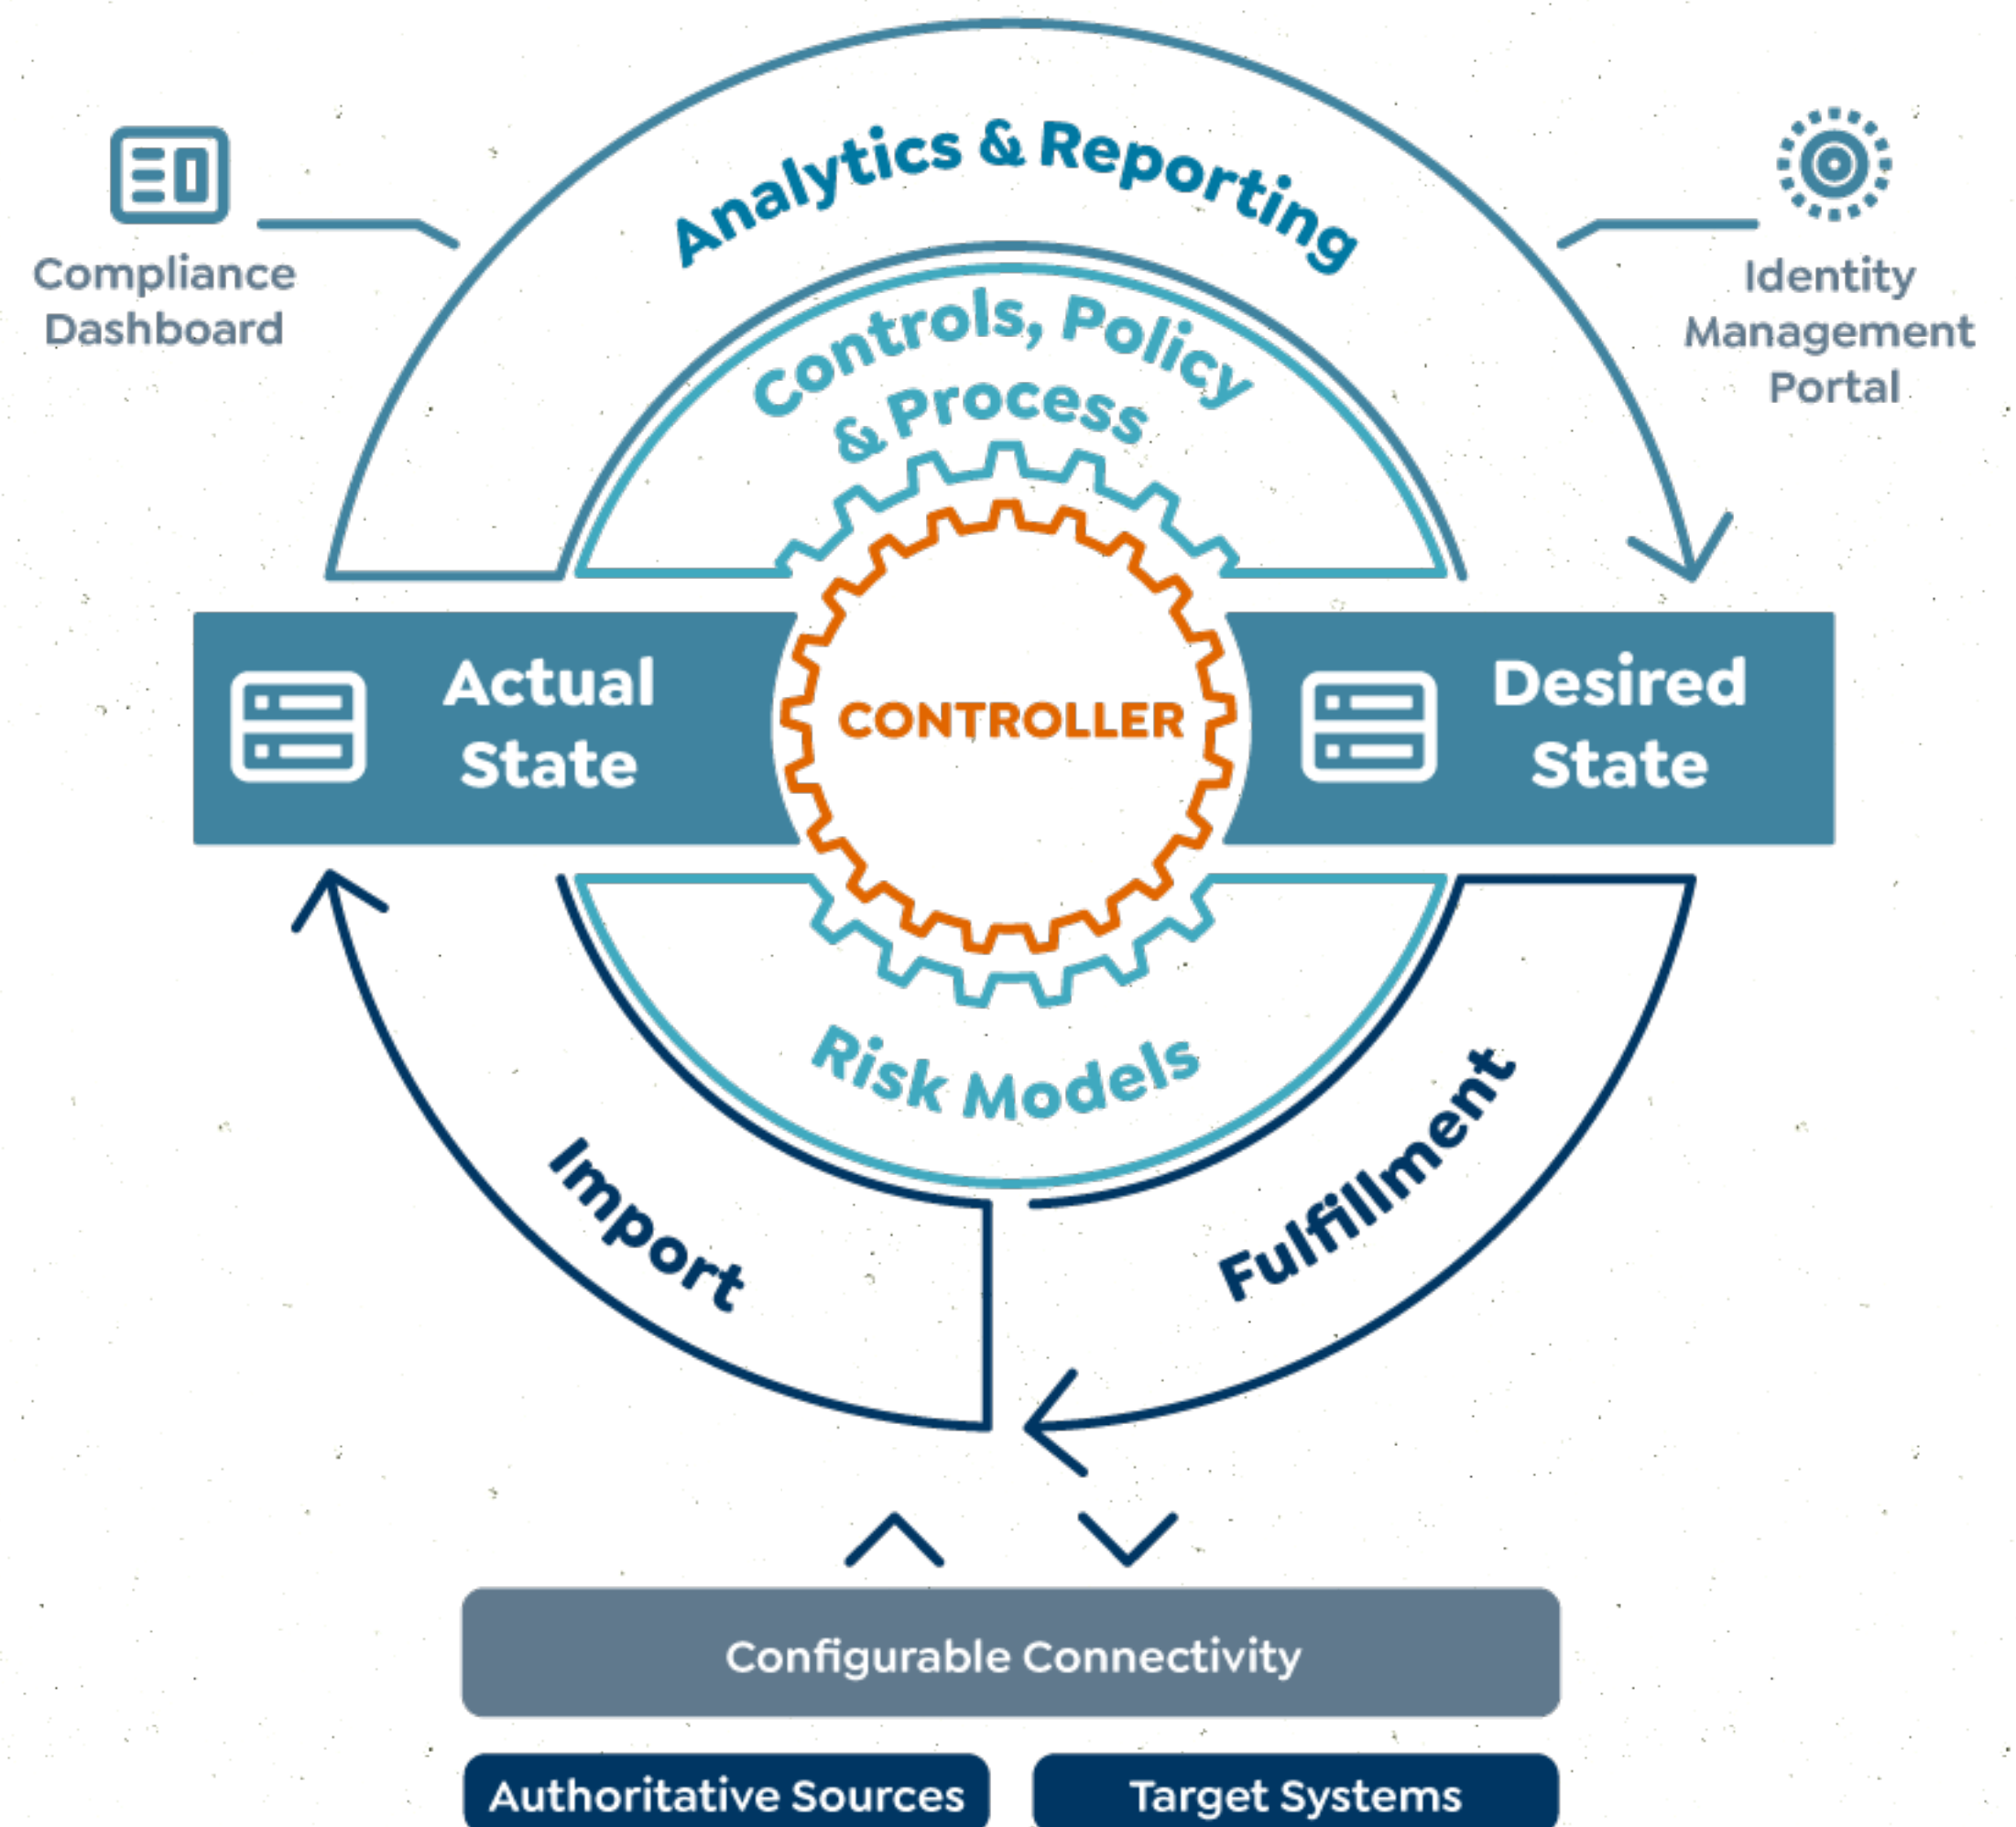

A modern IGA solution is a cloud native, enterprise ready, full-featured IGA solution that can be deployed in 12 weeks. It gives you high governance and audit standards, modern access automation and decision support.

# What is Modern IGA?

Simply put, Modern IGA is a full-featured cloud-native solution that ensures a quick time-to-value, often in less than three months. It ensures people have the right access they need, when they need it, and gives IT the tool they need to manage identities and access rights with the help of intelligent decision support. With rapid implementation, you can achieve efficiency, compliance and security quickly.

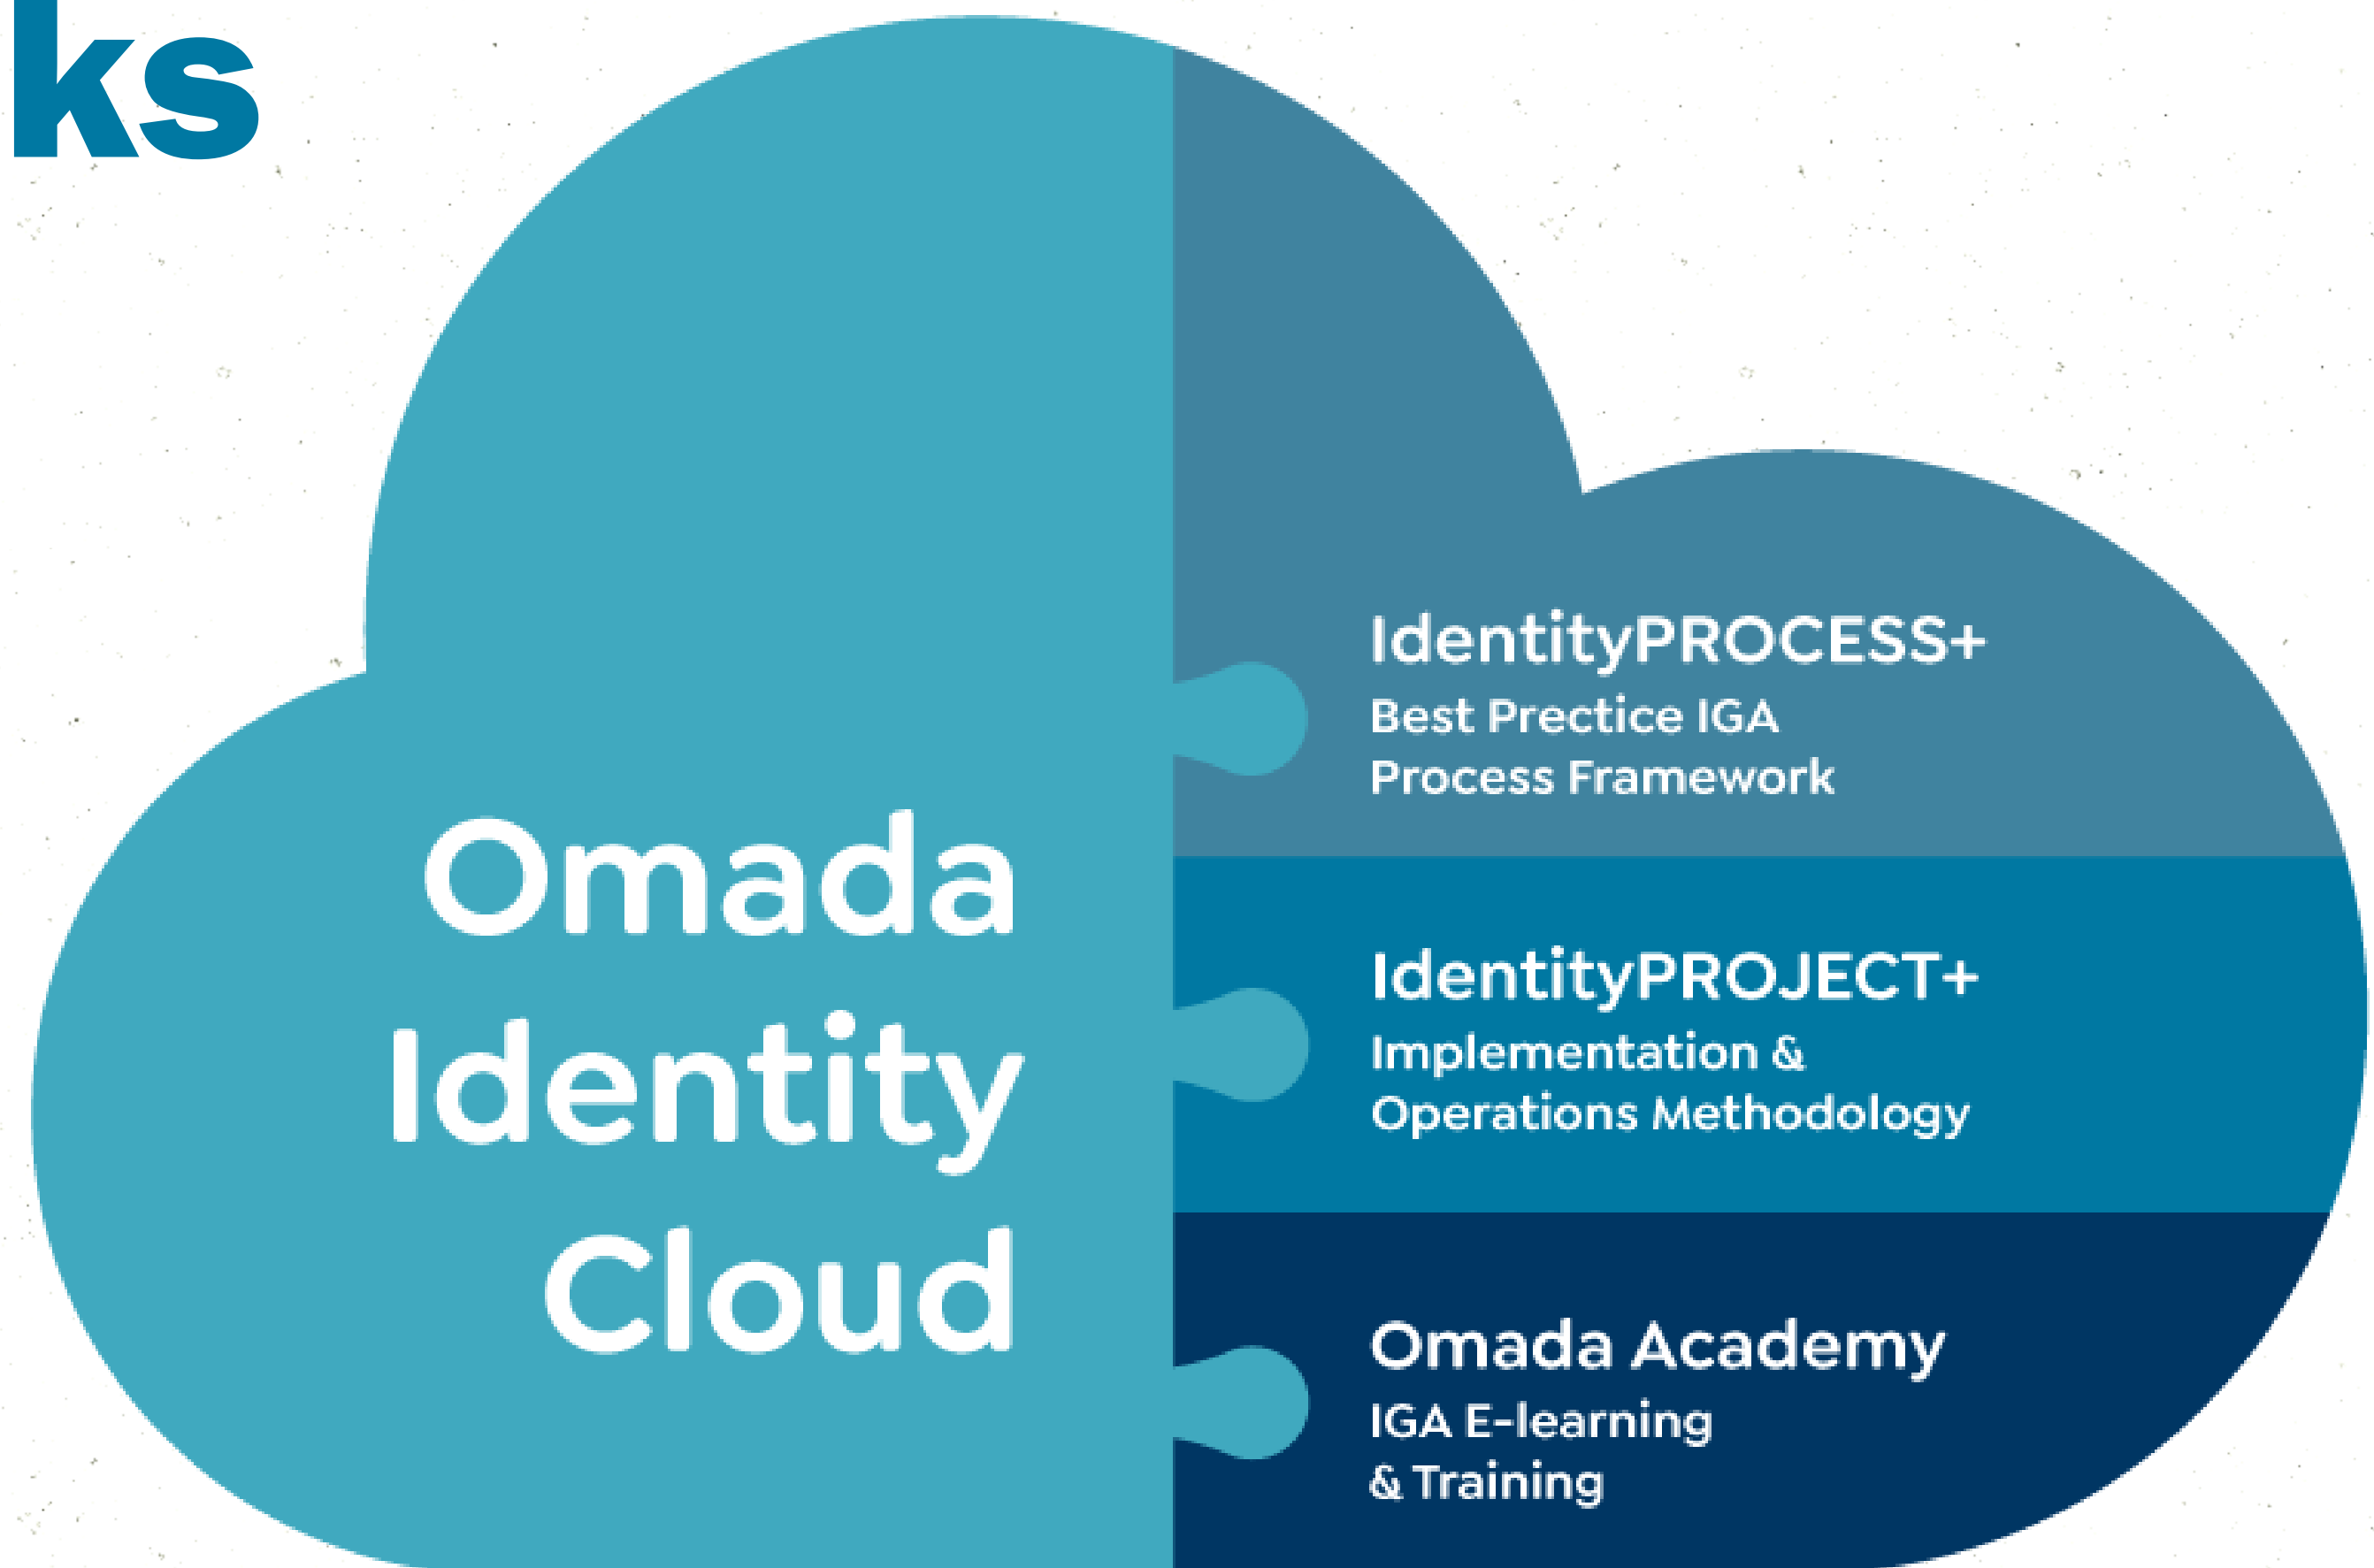

With built-in configurable connectivity, it's easy to start with offline systems and simple file-based integrations and transition to automation with little added work. Data can be pulled from authoritative systems as well as target systems.

Your data is imported into a more advanced, layered data model, which is extensible, ensuring flexibility. This import is also a mirror of your "actual state."

# Omada's Modern IGA Building Blocks

- + Together, these building blocks deliver rapid and reliable results that give organizations the maximum value of their IGA investment.

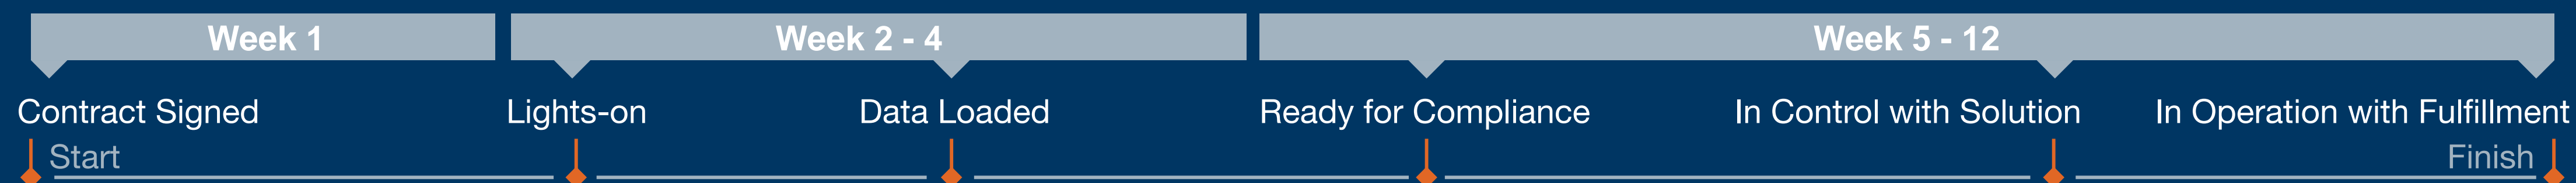

# Omada Identity Cloud Accelerator

To ensure a faster, more successful cloud deployment, the Omada Accelerator provides a combination of SaaS technology, best practices, method and enablement, along with improved time-to-value. With Omada Accelerator you get:

- + Five contained value steps with clear exit criteria
- + A full connection to HR systems and AD/AAD's
- + Full Omada Identity Cloud implementation including three environments (production, pre-production, integration/development)
- + Complete integration of two business systems
- + Industrialized system onboarding
- + Governance and self-service capabilities
- + Training for self-sufficiency
- + A strategic customer-specific road map for further implementation
- + Rapid deployment in 12 weeks

# Omada Identity Cloud

Omada Identity Cloud meets the security, compliance, and efficiency needs of business leaders, removing cost and uncertainty from managing identities and access.

The solution enables organizations to manage identity lifecycle, policy and role management, access requests, access certification, and fulfillment using automated provisioning and service tickets. It provides configurable adaptable models out of the box, minimizing the time and cost of administration.

- + A full-featured IGA with granular, automated controls, access automation, and high governance and audit standards.
- + A solution that is enterprise-grade and scalable, built on a cloud-native architecture.
- + A standardized implementation and adoption methodology based on proven best-practice framework to reduce risk and ensure time-to-value.
