

Omada Identity Cloud Accelerator Package

Successfully Deploy Identity Governance and Administration Within 12 Weeks

To ensure a fast and successful implementation of identity governance, the Omada Identity Cloud Accelerator Package provides five-step process with clear exit criteria.

Time to value has notoriously been the barrier to entry for an organization looking to kick start an Identity Governance and Administration (IGA) program. As business and cybersecurity requirements rapidly change, it can be easy for businesses to think that they need bespoke solutions and processes to fit their unique needs.

However, this often results in overly customized IGA solutions that slow business operations and increase ownership costs. This is where having a repeatable, standards-driven implementation approach is key.

Accelerate IGA Projects

The Omada Identity Cloud Accelerator Package offers a standardized implementation approach for deployment, a best-practice framework for process design, and training for efficient user adoption. With five value steps each organization can implement Omada Identity Cloud, with a defined roadmap for future readiness. The five steps are:

Deploy in 12 weeks

1. Establish

Build foundation for administrators for self-sufficiency, as well as establishing clean data.

2. Join

Get insight into your actual state of identities and users access with governance overview of 'Who has access to what'.

3. Control

Perform access reviews and establish expected state to achieve compliance with business policies and regulations (e.g., ISO) and train the organization for improved cyber security awareness.

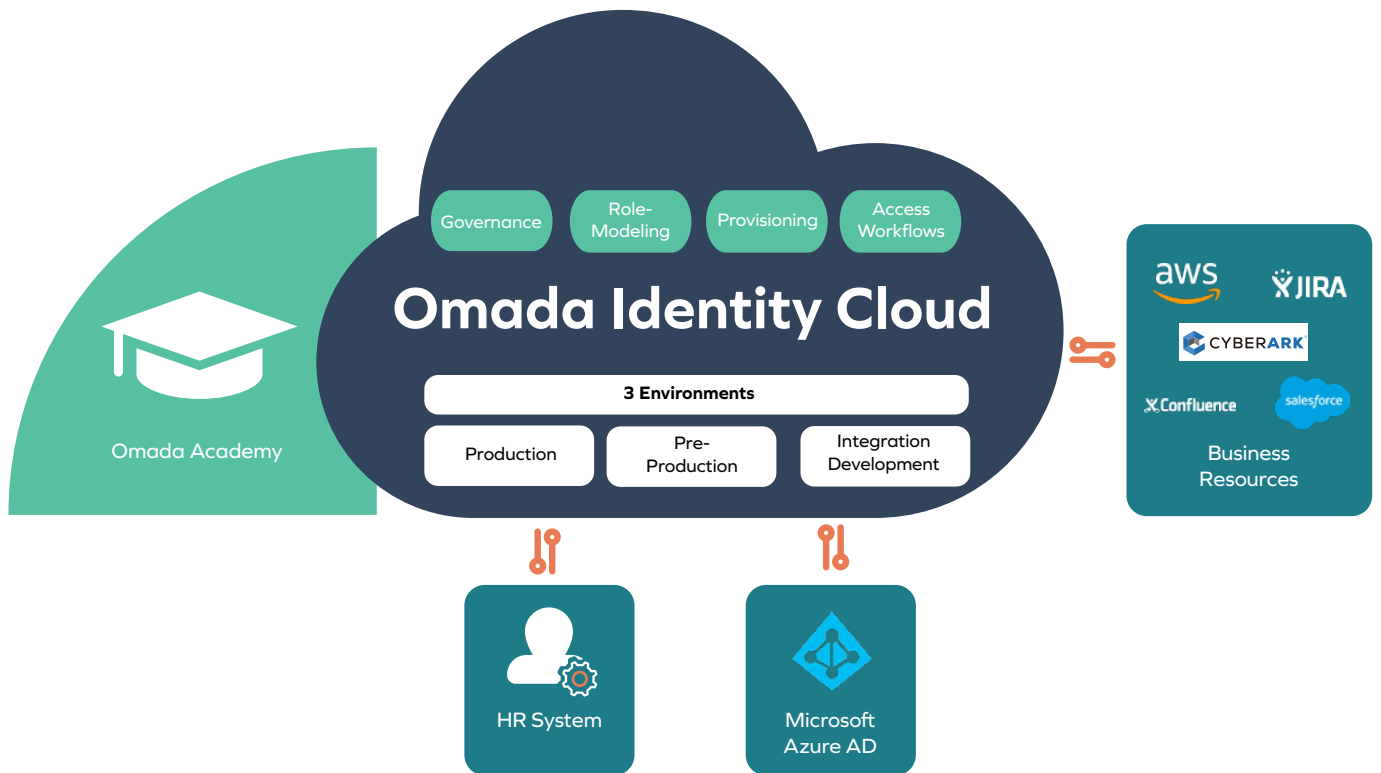

4. Expand

Enable business efficiency through self-service access request and approval workflows. Control of one critical system (e.g. ERP) with users trained and prepared for further IGA expansion.

5. Automate

Achieve end-to-end fulfillment of access to target systems and improved efficiency with birthright roles and policies. Quality improvement with role descriptions and classification.

Omada Identity Cloud

Omada Identity Cloud Accelerator Package

After 12 weeks, Omada customers can expect to have the following tangible outcomes:

- Onboard authoritative source to read identity data
- A full integration to directory service (AD, Azure AD, LDAP, etc.), and one additional business system
- Industrialized system onboarding
- Governance and self-service capabilities
- Basic role model with birthrights and assignment policies based on identity attributes
- Training for self-sufficiency and continued learning
- A strategic customer-specific road map for further implementation

About Omada

Omada, a global market leader in Identity Governance and Administration (IGA), offers a full-featured, enterprise-grade, cloud native IGA solution that enables organizations to achieve compliance, reduce risk, and maximize efficiency. Founded in 2000, Omada delivers innovative identity management to complex hybrid environments based on our proven best practice process framework and deployment approach.
