

SecZetta

Most organizations have no way to centrally track and manage the relationships with their burgeoning number of non-employees and therefore struggle with managing appropriate access to enterprise assets. SecZetta enables organizations to execute risk-based identity access and lifecycle strategies for vendors, partners, contractors, freelancers, bots, service accounts, and other non-employee populations.

Functionality

Connectivity between Omada and SecZetta enables organizations to:

- Request Access Rights
- Provision and Deprovision Access
- Reconcile Accounts
- Review Access
- Perform Advanced Risk Scoring
- Classify Data
- Initiate Emergency Lockout

The Omada Configurable Connectivity offers:

- Template-driven connectivity for ease of implementation
- Flexible data model
- Adaptable and extensible data fields and attributes
- Choice of multiple authentication methods

A configurable connectivity approach provides an efficient, reliable and fast alternative that is better suited to the dynamic, hybrid IT environment where connectivity is a continuous activity. This connector for Omada and SecZetta can be leveraged using Omada’s configurable connectivity framework, which supports standard connectors for SCIM, REST, OData, LDAP, PowerShell, .CSV, .NET, SQL, and SOAP.
