

Db2 is a family of data management products, including database servers, developed by IBM. It initially supported the relational model, but was extended to support object-relational features and non-relational structures like JSON and XML.

Functionality

Connectivity between Omada and IBM Db2 enables organizations to:

- Imposter Master Data
- Perform Advanced Risk Scoring
- Classify Data
- Initiate Emergency Lockout

Validated objects Read:

- Identify
- Context
- Manager
- Content assignments
- Accounts
- Resources
- Resource assignments

Validated objects Write:

- None

The Omada Configurable Connectivity Framework offers:

- Template-driven connectivity for ease of implementation
- Flexible data model
- Adaptable and extensible data fields and attributes
- Choice of multiple authentication methods

A configurable connectivity approach provides an efficient, reliable and fast alternative that is better suited to the dynamic, hybrid IT environment where connectivity is a continuous activity. This connector for Omada and IBM Db2 can be leveraged using Omada's configurable connectivity framework, which supports standard connectors for SCIM, REST, OData, LDAP, PowerShell, .CSV, .NET, SQL, and SOAP.
