

MariaDB is a community-developed, commercially supported fork of the MySQL relational database management system, intended to remain free and open-source software under the GNU General Public License.

Functionality

Connectivity between Omada and MariaDB enables organizations to:

- Imposter Master Data
- Classify Data
- Initiate Emergency Lockout

Validated objects Read:

- Identify
- Context
- Manager
- Content assignments
- Accounts
- Resources
- Resource assignments

Validated objects Write:

- None

The Omada Configurable Connectivity Framework offers:

- Template-driven connectivity for ease of implementation
- Flexible data model
- Adaptable and extensible data fields and attributes
- Choice of multiple authentication methods

A configurable connectivity approach provides an efficient, reliable and fast alternative that is better suited to the dynamic, hybrid IT environment where connectivity is a continuous activity. This connector for Omada and MariaDB can be leveraged using Omada's configurable connectivity framework, which supports standard connectors for SCIM, REST, OData, LDAP, PowerShell, .CSV, .NET, SQL, and SOAP.
